EXPERIENCE

Olympus Lock has over 30 years of experience designing and manufacturing easily rekeyable pin tumbler, interchangeable core and engineered cabinet lock bodies for third party cylinders. We offer a wide selection of keyways and cabinet lock solutions for commercial and institutional facilities. Our design philosophy is to create locks that provide long-term benefits to the facility through increased efficiency and easy maintenance.

APPLICATIONS

Olympus cabinet locks are used in a variety of cabinet and casework applications including: K-12 public schools, colleges and universities, correctional facilities, medical offices, hospitals, casinos, retail cash drawers, lockers, kiosks, retail showcases, airline ticket counters, museums, hotels and motels, amusement parks, theaters, restaurants, country clubs, libraries, airports, police stations, fire stations and churches.

PIN TUMBLER SOLUTIONS

Olympus Lock specializes in pin-tumbler cabinet locks for the institutional and retail marketplace. When large numbers of locks will be installed within a facility, pin tumbler locks are preferred because they are more secure and allow the complex master keying and sub-master keying required in larger institutional settings such as schools, banks and hospitals. We provide a wide range of cabinet lock options for the cost conscious, yet security minded user. Beyond that, we can supply cabinet locks keyed to match your door hardware allowing for "one-key" simplification.

INNOVATION

We hold numerous U.S. and Canadian patents proving our commitment to provide innovative solutions for your cabinet lock needs. It has always been the intent of Olympus to provide cabinet locks that are easy to install, use and service. Each product is carefully designed, engineered and manufactured to exacting standards. We offer a wide range of accessories to make the installation, use, and service of our products as easy as possible.

SERVICE

Our delivery is the fastest in the industry. We have an extensive inventory of off-the-shelf masterkeyed locks and can ship most custom keyed orders within 1-5 business days.

ELECTRONIC KEY RECORDS

We manage and save all our custom keying records for future reference. Need to add locks to an existing job? No problem. We've got all the records at our fingertips making it easy for you to order locks for various job phases. We manage the records so you don't have to.

SPECIFICATIONS

We provide comprehensive pre-written architectural specifications for each of our locks. Specifications can be obtained directly from our web site at olympuslock.com.

— Heavy duty locks for high use applications —

BENEFITS OF PIN TUMBLER

Pin tumbler key systems provide significantly more key changes than disc tumbler systems. See the chart below for the typical number of allowable key changes under a single master key:

Wafer/disc	80 key changes
4 pin tumbler.....	650 key changes
5 pin tumbler.....	2,000 key changes
6 pin tumbler.....	4,000 key changes
7 pin tumbler.....	16,000 key changes

ANSI/BHMA STANDARDS

We offer a selection of cabinet locks that have passed ANSI/BHMA Grade 1 or Grade 2 testing requirements and are compatible for use when ANSI/BHMA locks are specified.

PIN TUMBLER

- 5 or 6 chambers, pin #s 0-9 (10 total steps per chamber)
- 2000+ keyed different and master keyed total key changes
- Can be grand master keyed
- More secure keyway
- For high-use commercial applications

DISC TUMBLER

- 5 or 6 chambers disc #s 0-2 (3 total steps per chamber)
- 80 keyed different and master keyed total key changes
- Cannot be grand master keyed
- Less secure keyway
- Typical usage is in furniture or when a less expensive lock is desired

CABINET DOORS

DRAWERS

STANDARD FUNCTION

Key removable in the locked or unlocked position. Locks ship with standard function unless key retaining is specified at time of order.

KEY RETAINING

The key cannot be removed from the lock while in the "unlocked" position. Key-retaining function is generally used in instances where cabinets or drawers should not be left unlocked.

HANDING

Handed locks must be ordered either LH, RH, VH or IH (see figure at left).

Non-handed locks can be ordered as either door or drawer. Door locks will work in both LH or RH applications and drawer locks will work for both vertical or inverted function.

Product Groups

► COMBI-CAM™

Resettable combination cam and locker locks. Fits in standard 3/4" diameter hole prep common to most cam locks. Provides for keyless operation. (Pages 8-9)

► PADLOCKABLE CAM LOCK

This unique cam lock is typically used in locker applications where the end-user will supply the padlock. We offer a variety of additional cam styles and lengths. Our DCP500 includes an integrated cabinet pull. (Pages 10-11)

► CASCADE SERIES®

Disc tumbler cam locks. Fits in standard 3/4" diameter hole prep common to most cam locks. Will key into existing CompX disc tumbler systems. Packaged with cylinder assembled for easy installation. (Page 13)

► N SERIES

A value-priced alternative to commercial keyway locks, N Series locks use the National D4291 (4 pin) or D4292 (5 pin) key system. A variety of lock types are available including door and drawer deadbolt and latch locks, cam locks, sliding door plunger locks, ratchet locks and file cabinet locks. (Pages 11-21, 63)

► R SERIES

A value-priced alternative to commercial keyway locks, these locks use the CCL R1 (5 pin) key system. A variety of lock types are available including door and drawer deadbolt and latch locks, cam locks, sliding door plunger locks and ratchet locks. (Pages 23-28)

► SCHLAGE C KEYWAY

This product family offers locks utilizing the Schlage C keyway—one of Schlage's most popular keyways. Choose from door and drawer deadbolt and latch locks, cam lock or ratchet lock. All locks are easily rekeyable. (Pages 28-33)

► LESS CYLINDER (Schlage Compatible)

This product family includes the same locks as our Schlage C keyway but without cylinders. You can install a variety of popular third-party (Schlage compatible or Medeco) cylinders so your cabinet locks can match the same key system as the rest of the facility. (Pages 30-35)

► LESS CYLINDER (Sargent Original)

We offer door and drawer deadbolt lock bodies made specifically to chamber Sargent original cylinders. Key your cabinet locks into your existing Sargent system with ease. (Page 29)

► ENCLOSURE LOCKS

These locks are used most commonly in metal traffic enclosure cabinets for municipalities. We have available the common KA#2 or an SFIC version for which we also supply Green, Red, Blue, White or Orange cores. (Pages 46-47)

► RIM CYLINDER CONVERSION KIT

Electronic rim cylinder conversion kit allows you to convert a SALTO US rim cylinder and other third party US rim cylinders into a latch or deadbolt cabinet lock. (Page 45)

► SARGENT IC CORE

Olympus is the only company that manufactures cabinet locks for Sargent interchangeable core. Add one-key convenience to your existing Sargent interchangeable core system by having your cabinets keyed to match your existing Sargent IC system. (Page 44)

► SCHLAGE FULL-SIZE IC CORE

Olympus offers a range of cabinet lock options that will accept Schlage full-size (or compatible) interchangeable cores. Locks include door and drawer deadbolt locks, cam lock, latch lock and ratchet lock. (Pages 36-39)

► CORBIN/RUSSWIN IC CORE

Olympus is the only company that manufactures cabinet locks for Corbin/Russwin interchangeable core. Locks are available door and drawer deadbolt, drawer latch and cam lock. (Pages 40-41)

► MEDECO/YALE IC CORE

Looking for a cabinet lock to accept a Medeco or Yale large format interchangeable core? We have them. Locks are available door and drawer deadbolt and cam lock. (Pages 42-43)

► SMALL FORMAT IC CORE

(Best Compatible) Olympus offers a wide selection of small format (BEST style) interchangeable core locks including direct retrofits for Best original cabinet locks. Available styles include door and drawer deadbolt and latch locks, cam locks, sliding door plunger locks, through-glass locks, ratchet locks and mailbox locks. (Pages 48-59, 47)

► BEST KEYWAY 3/4" CAM LOCK

This is a non-IC core cam lock available with a Best A, B, E, F, G, J, K, L or R keyway. It fits in a standard 3/4" hole and includes our patented cam shifting mechanism for maximum flexibility. (Page 60)

► BRASS PADLOCKS

BP Series all weather indoor/outdoor brass padlocks are available either keyed alike or keyed different in a variety of sizes and shackle lengths. The CRB Series padlocks accept a Corbin/Russwin interchangeable core cylinder. (Page 62-63)

The only liability of the company in tort or in contract, whether under this warranty or otherwise shall be limited to repair or replacement of products which are returned prepaid to us within one year of the date of original purchase.

This is a limited warranty and is in lieu of all other representations and expressed or implied warranties. Under no circumstances shall Olympus Lock be made liable for any incidental or consequential damages or losses.

► CALIFORNIA PROPOSITION 65 STATEMENT

What is California Proposition 65?

Also known as the Safe Drinking Water and Toxic Enforcement Act of 1986, California Proposition 65 is a law that requires warning to consumers if a product exposes consumers to a wide variety of chemicals known by the State of California to cause cancer, birth defects and/or other reproductive harm. Proposition 65 applies only in California.

What does the Proposition 65 warning mean?

A Proposition 65 warning means that the business issuing the warning knows that one or more listed chemicals is merely present in its product. A warning must be given unless a business demonstrates that the exposure it causes poses "nosignificant risk."

Why does Olympus Lock place a Proposition 65 warning on its products?

A Proposition 65 warning means one of two things: (1) the company evaluated the exposure and has concluded that product exceeds the "no significant risk level"; or (2) the company has chosen to provide a warning simply based on its knowledge about the presence of a listed chemical without attempting to evaluate the exposure. Out of an abundance of caution, Olympus Lock has elected to place the Proposition 65 warning on all products shipped to California.

Replacement Guide

GRAND MASTER KEYING

Before we can create a grand master key system, we need to have a realistic idea of the complete number of masters, sub masters and key codes that the system will require and whether there will be future expansion. Without this information at the beginning of the process, the options for future expansion may be limited. Grand master keying not available for Cascade Series disc tumbler locks.

SPECIAL STAMPING

Custom (non-stock) lock face and key stamping and/or engraving is available for an additional charge. See price list for details and pricing.

► CL-HIT-25 Cabinet Lock Drill Guide

SPECIFICATIONS

Rubber lined jaws: Protect cabinet doors and give greater holding power.

Adjustable stop: For repeat installations on the same cabinet door.

Maximum thickness: Works on doors up to 1-1/2" thick.

Hole location: Locate the cylinder hole up to 2-5/8" from the edge of the door.

Five sizes of drill bushings for versatility:

3/4", 7/8", 1", 1-1/8" and 1-1/4".

These bushings are designed to be used with clean cutting Forstner type drill bits and are not compatible with hole saws, paddle, or spade-type bits.

► CL-MP-118 Double D Metal Punch For 1-1/8" diameter cam locks

SPECIFICATIONS

Hole type: Punches a DOUBLE "D" hole in sheet metal cabinet drawers and doors.

Metal type: Use on metal cabinets or any type of sheet metal door made with 18 gauge (.048) or lighter steel.

To use: Drill a 3/4" hole centered where the cam lock is to be installed, slide the punch through the hole and tighten down the hex nut with a 11/16" wrench or socket set.

Hole size: Punches a DOUBLE "D" hole size approximately 7/8" wide by 1-1/8" high.

For use with: 1-1/8" diameter Olympus cabinet locks 720, 820, 920, CR25 ME93, SA54 and YA93.

► ETS1-PL Pull for 1-1/8" diameter locks

Item	Finish	Description	Use With
ETS1-PL	26D, US3	1/8" thick pull	700, 721, 754, 777, 800, 850, 854, 888, 931, 950, L92V, L72V
ETS1-125	26D, US3	1/8" thick through-bolt plate	
ETS1-250	26D, US3	1/4" thick through-bolt plate	

Note: ETS1-PL requires use of ETS1-125 or ETS2-250

SPECIFICATIONS

Mounting: The ETS1-PL cabinet pull fits between our ETS1 through-bolt plate and the face of the cabinet. If mounted "pull down" in drawer applications, the pull will protect the face of the cabinet from the wear and tear of hanging keys.

Through-bolt security: When combined with the ETS1 through-bolt plate, they provide through-bolt mounting of the cabinet lock and pull in a single unit.

Function: Works for both door or drawer applications

Compatible with: Existing ETS1 hardware and screws

Available finishes: US3 and US26D

Use with 1-1/8" barrel diameter locks: 700, 721, 754, 777, 800, 850, 854, 888, 931, 950, L92V, L72V

► ETS2-PL Pull for 7/8" diameter locks

It is recommended that you use the ETST2 spacer/template for proper placement and drilling of mounting holes prior to installation.

Item	Finish	Description	Use With

820 requires proper installation of universal driver into back of cylinder (see picture at right) →

The 820 Series includes universal driver (item no. 10-360). For cam rotation to work properly, the supplied universal driver must be installed under the cap at the back of the cylinder in either of the 2 vertical positions indicated at the right (with tab to the left or right only). DO NOT install universal driver in the horizontal (tab up) position.

Schlage compatible

Rekeying Instructions

Rekeying instructions are also available on our website under each individual product page or videos in our video library at www.olympuslock.com

► 100,200,500,600,996,997,998,999,L20V

1. Remove set screw from barrel of lock.
2. Remove internal cylinder housing from lock body.
3. Remove brass retainer on back of cylinder plug.
4. Turn key 1/4 turn and place follower tool into back of cylinder plug.
5. Push follower through lock, removing plug for rekeying.

► 300SD,400SD

Note: These locks need not be removed from cabinet to be rekeyed.

1. Open lock (cylinder projects forward).
2. Locate "speed release" button on left side of projected cylinder and depress with sharp tool. Cylinder will spring forward.
3. Turn key 1/4 turn and pull cylinder forward out of lock.
4. Pull up retaining pin located at rear of cylinder. Cylinder may be rekeyed in two ways: use a follow tool to remove plug, or access top slide.
5. After keying, hold bolt stable and reinsert cylinder while depressing "speed release." Lock cylinder will automatically realign itself and snap back into place.

► 329R/429R

1. Remove strap from lock.
2. Turn lock over so that the back of the lock faces up and you have access to the set screw.
3. Remove the set screw and the small triangular metal cap.
4. Turn the lock onto its side with the protruding section facing you.
5. Using a sharp tool or paperclip, depress the button at the bottom of the hole. This will release the cylinder housing for removal.
6. Remove the cylinder housing from the lock body.
7. Rekey as necessary.
8. Reassemble lock.

► B7,DCN,DCR,FC10

1. Remove cam and screw.
2. Turn lock upside down.
3. Take a sharp tool and push retainer staple out.
4. Turn key 1/4 turn and place follower tool into back of cylinder plug.
5. Push follower through lock removing plug for rekeying.

► T37

1. To remove bolt:
 - a. Turn key to the 2:00 position, pull bolt up
 - b. Using a small tool, depress the bolt spring through the hole on the back of the lock and pull the bolt out
2. Remove the trim collar from the lock.
3. Slide the pin retaining cap off to expose springs and pins.
4. Rekey as necessary.
5. After keying, slide pin retaining cap back into place.
6. Replace trim collar.
7. To reinsert bolt:
 - a. Insert key and turn to 2:00 position.
 - b. Insert bolt until spring snaps into place.

► PN50

1. Visit our website at: www.olympuslock.com for complete rekeying instructions.

► N078,R078

1. Remove set screw from barrel of lock.
2. Remove internal cylinder housing from lock body.
3. Remove brass retainer on back of cylinder plug.
4. Turn key 1/4 turn and place follower tool into back of cylinder plug.
5. Push follower through lock, removing plug for rekeying.

► 700,800,L78,754,854

1. Remove set screw from barrel of lock.
2. Turn key 1/4 turn and pull out cylinder and housing from lock body.
3. Extract cylinder and rekey same as a Schlage-style cylinder. Olympus brass cylinder body will chamber Schlage and Weiser original cylinders along with Lori replacement plugs. Less cylinder locks may chamber other manufacturer's cylinders.
4. Replace cylinder in housing. For proper operation, lazy cam must be timed.

Door timing: Driver bar faces away from direction the bolt is projecting.

Drawer timing: Driver bar faces in same direction the bolt is projecting.

5. Insert cylinder and housing by aligning set screw and hole.
6. Push until cylinder is approximately 1/8" from seated position. Use key to pick up lazy cam which will fully seat cylinder. If key does not withdraw at end of bolt throw, cam is not timed correctly (see "timing" above - Step 4).

► 820

1. Remove both set screw and set screw/stop pin from back of lock.
2. Remove rear housing section from back of lock.
3. Remove internal cam driver from back of cylinder.
4. Remove cylinder from lock body.
5. Remove brass retainer on back of cylinder plug.
6. Turn key 1/4 turn and place follower tool into back of cylinder plug.
7. Push follower through lock, removing plug for rekeying.

► 829

1. Turn lock over and remove the 4 screws from the bottom rectangular plate.
2. Remove bottom plate, then remove remaining set screw from bottom of lock.
3. Remove cylinder and cylinder top block from lock body.
4. Rekey cylinder, then reassemble into lock body using the reverse of above steps.

► 850

1. Remove set screw from barrel of lock.
2. Remove internal cylinder housing from lock body.
3. Turn key 1/4 turn and pull out cylinder and housing from lock body.
4. Extract cylinder and rekey same as a Schlage-style cylinder. Olympus brass cylinder body will chamber Schlage and Weiser original cylinders along with Lori replacement plugs. Less cylinder locks may chamber other manufacturer's Schlage compatible key-in-knob cylinders.
5. Insert cylinder and housing by aligning set screw and hole.

Olympus Lock — Institutional Grade Cabinet Locks

Small Pin

Available on the National or CCL keyway, these value priced locks allow for high quality, pin tumbler security without the need of a commercial keyway.

Interchangeable Core

Match your cabinet locks to your existing interchangeable core key system. Choose from small format (BEST), Schlage, Corbin Russwin, Medeco, Sargent or Yale.

Schlage

Available in Schlage "C" keyway or less cylinder to accept any Schlage compatible key-in-knob cylinder including ILCO, Medeco, Videx and Mul-T-Lock as well as lock bodies for Sargent original cylinders.

Specialty

Padlockable Cam Locks use padlocks as locking device. Great for lockers. Rim cylinder conversion kit allows you to turn any US rim cylinder into a latch or deadbolt cabinet lock.

Padlocks & Accessories

Brass padlocks, spacers, through-bolt mounting plates, strikes, trim rings, SFIC cylinders, keys, pin kits, display boards and installation tools.
